## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 and 2, drawn to a grain assembly, classified in class 102, subclass 288.
  - II. Claims 3-9, drawn to a grain assembly, classified in class 102, subclass 292.
  - III. Claims 10, drawn to a grain assembly, classified in class 102, subclass 285.
  - IV. Claims 11-25, drawn to a grain assembly, classified in class 102, subclass 283.
  - V. Claims 26 and 27, drawn to a gas generator assembly, classified in class 102, subclass 530.
  - VI. Claims 28 and 29, drawn to a system for producing gas, classified in class 102, subclass 200.
  - VII. Claims 30 and 31, drawn to a method of generating a gas, classified in class 102, subclass 202.
  - VIII. Claims 32-38, drawn to a method of producing a gas, classified in class 102, subclass 293.
  - IX. Claims 39 and 40, drawn to a method of producing gas, classified in class 102, subclass 282.
  - X. Claims41 and 42, drawn to a method of producing a gas, classified in class 102, subclass 202.12.

The inventions are distinct, each from the other because of the following reasons:

2. The inventions are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different

Page 2

Art Unit: 3641

functions, or different effects (MPEP § 806:04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions as disclosed by applicant.

3. Because these inventions are distinct for the reasons given above and the search required for each Group is not required for the other Groups restriction for examination purposes as indicated is proper.

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

Grain relation

a. the grain segments in the first pair are symmetric with respect to each other

b. the grain segments have different configurations.

Controller ignition

c. the controller is configure to ignite one end of each grain element

d. the controller is configured to ignite both ends of each grain element

Controller ignition sequence

e. the controller is configured to ignite the grain elements sequentially

f. the controller is configured to ignited the grain elements simultaneously.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species (from each the grain relation, controller ignition and controller ignition sequence) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon,

Art Unit: 3641

including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 3641

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michelle (Shelley) Clement whose telephone number is 571.272.6884. The examiner can normally be reached on Monday thru Thursday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 571.272.6873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
